

# Shadetuff

## About Shadetuff

The first thing that people notice about Shadetuff is its unique dark green colour, fine leaf and lush feel, adding a touch of class to prestige home lawns and for those who want the 'wow factor' with low maintenance care.

Shadetuff can be mowed to achieve a bowling green appearance or can be left unmown as a feature grass. Regardless, it is slow growing and requires less mowing and general maintenance in comparison to other turf varieties.

Shadetuff is an incredibly high quality, well adapted turf to suit North Western Australia's climate. It performs well in full sun through to heavy dappled tree shade, which is perfect for home lawns.

As it needs little or no fertiliser, Shadetuff is the perfect addition to environmentally sensitive areas to minimize nutrient loss into waterways

## In Summary

- High shade tolerance (min 3 hours direct sun daily)
- Low maintenance
- Resistant to invasive weeds
- Prestige lawn
- Drought tolerant
- Fine narrow leaf
- Vibrant green colour throughout the year
- High wear tolerance
- Grows well with minimal watering
- Remediation of salt affected sites
